DEPARTMENT OF PAEDIATRICS

VALUE ADDED COURSE

Vaccinology Course - Life Cycle Approach from Birth to Geriatric Age

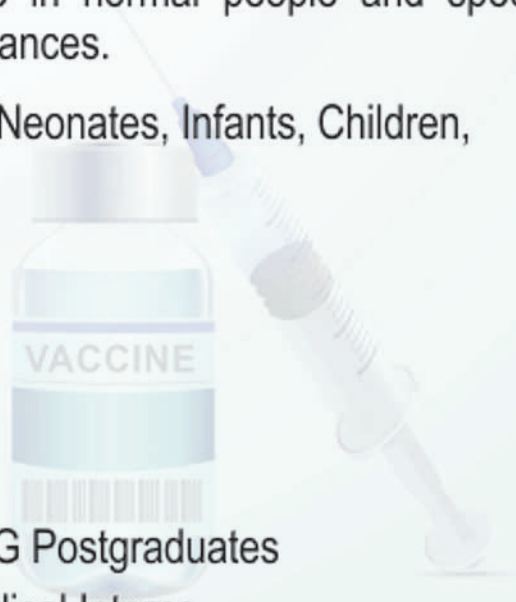

Vaccination is one of the important measures of preventing infectious disease. Vaccination is a part of national program and forms the very important part of paediatric practice. The scope is extended to adult and geriatric population as the need for adult and geriatric vaccination is better understood now with the special emphasis on high risk groups. Training in vaccinology is the need of the hour. Postgraduate lack the basics and skills of immunization and there is a fast development of new vaccines and there is a frequent change in a vaccination schedule in normal people and special circumstances.
